    The present sequence comprises the eth gene cluster of Rhodococcus ruber strain CNCM I-1889, which encodes a cytochrome P450 system involved in the cleavage of ether fuel additions. Expression of this gene cluster is induced by the fuel additive ethyl tert-butyl ether (ETBE). Loss of ability to degrade ETBE is associated with a chromosomal rearrangement rearrangement occurs between two 5.6 kb duplicated sequences. The eth gene cluster comprises the etha, ethB, ethC, ethD and ethR open reading frames. These encode a transcriptional activator (EthB), a ferredoxin reductase (EthA), an ETBE-inducible cytochrome P450 (EthB), a ferredoxin reductase (EthA), an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin coft the eth gene cluster allows the construction of probes and biosensors for detecting pollution by an ether fuel and for assessing the potential of a contaminated soil or effluent to cleave the ether fuel. Also provided are recombinant bacteria, plant, fungus or yeast cells (and tert-butyl alcohol) degradation or mineralization, for use in ether contaminated soil or effluent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4447

The present sequence is a region of Rhodococcus ruber strain CNCM I-1889 DNA that is deleted in strains that have lost the ability to cleave the ether fuel additive ethyl tert-butyl ether (FTBE). Loss of ability to degrade ETBE is associated with a chromosomal rearrangement resulting in a 14.3 kb deletion including the eth gene cluster. This rearrangement comprises the eth, ethB ethC, ethD and ethR open reading frames. These encode a transcriptional activator (EthR), a ferredoxin reductase (EthA), an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible unknown protein (EthD). The identification of the eth gene cluster allows the construction of probes and biosensors for detecting pollution by an ether fuel and for assessing the potential of a contaminated soil or effluent to cleave the ether fuel. The present sequence is a BamHI fragment of Rhodococcus ruber strain CNCM 1-1889 DNA that includes an eth gene cluster encoding a cytochrome P450 system involved in the cleavage of their fuel additives. Expression of the gene cluster is induced by each (tert-buty) ether (ETBE). Loss of ability to degrade ETBE is associated with a chromosomal rearrangement resulting in a 14.3 kb deletion including the eth gene cluster. This rearrangement occurs between two 5.6 kb duplicated sequences. The eth gene cluster omprises the eth, eth b, eth and eth R open reading frames. These encode a transcriptional activator (EthR), a ferredoxin reductase (EthA), an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE-inducible cytochrome P450 (EthB), a ferredoxin (EthC) and an ETBE (and tert-butyl alcohol) degradation or mineralization, for use in ether fuel butyl bioremediation of a contaminated soil or effluent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     13242 reareccearecceargarcaccricreccaareceacececreareareacecerefrance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Rhodococcus ruber nucleic acid, useful for transforming bacteria for depolluting soil contaminated with ethyl tert-butyl ether comprises the cytochrome P-450 gene cluster involved in cleavage of ethyl tert-butyl

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a number of nucleotide and protein are quences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, actually acceptant and analysing particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the Buropean Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TCGAAACCGAAGCGGGAAGTATCGCTCATGGAAGCGGCCGTTCTGAACGGCGTGGACGGTA 115

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These sere useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium are second are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, patticularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    106
Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analyzing expression profile or pattern of a gene and identifying homologous gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    56 TCGAAACCGAAGCGGGAGTATCGCTCATGGAAGCGGCCGTTCTGAACGGCGTGGACGGTA

metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243

metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243

to AAB 79633 which are involved in carbon metabolism and energy

co production. The c. glutamicum SMP gene can be used in vectors (II) for

expression in host cells and production or medulation of production of

charles and production or medulation of production of

fine chemicals, such as an organic acid, a proteinogenic or

conproteinogenic amino acid (preferred), a purine or pyrimidine base, a

concleoside, a nucleotide, a lipid, a saturated or unsaturated fatty acid,

concleoside, an expendite, an aromatic compound, a vitamin, a cofactor, a

diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a

collyketide, or an enzyme. The presence of (I) or SMP proteins (III)

concleded by them are used for diagnosing the presence or activity of

corprehacterium diphtheriae in a subject. (I), (III), (III) or host cells

containing them are used to map genomes of or containing the containing sub protein sequences of interest, in

containing the maculating SMP protein activity, in modulating the

current in modulating SMP protein activity, in modulating the

metabolism of sugars, and in modulating high-energy molecule production

containing the metalogone and in modulating high-energy molecule production

contains and the contains and the contains activity, in modulating the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     147 redaceceacuerredrearredraticada de la redacecea de la redacece de la redac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      207 instrucinamiecececninamicanista a de mais 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  176 AGTGGCTAGATGCGCTGAAACCGCCGAGTGAGACCGAAGACGAAATGCT---CGATTGCG 232
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  267 CACAGTATGÁTGCGCCTTCCCCCATGGAGGAGATGAAAGATGCTGTGGGGTGCTG 326
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TCGAAGCCGTTTGCGGGGGGGCCTGTGCCTGCGCCACGTGCCACGTTTACGTTGGCCCCG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     56 TCGAAACCGAAGCGGGAGTATCGCTCATGGAAGCGGCCGTTCTGAACGGCGTGGACGGTA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated Corynebacterium glutamicum nucleic acid encoding a sur
metabolism and oxidative phosphorylation protein for production or
modulation of production of fine chemicals e.g. amino acids,
carbohydrates or enzymes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Corynebacterium glutamicum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches 135; Conservative

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          26-SEP-2001                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAH68525/c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidaring cell signalling and cell-cell interactions in higher elevaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS727)?

ABB72072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                 isolated nucleic acid detection reagent for detecting 1000 or more
se from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       111 CGGTATCGAAGCCGTTTGCGGGGGCGCCTGTGCCTGCGCCACGTGCCCACGTTTACGTTGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              262738
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 262858
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    262798
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These ret useful for identifying the matation point of a gene derived from a mutant of coryneform bacterium, meaturing expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a mucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 175
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               232
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analyzing expression profile or pattern of a gene and identifying homologous gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          56 TCGAAACCGAAGCGGGAGTATCGCTCATGGAAGCGGCCGTTCTGAACGGCGTGGACGGTA

capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB572072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       339 caagangaaaggcccraraaggcrrccrasccrasccraccaccraraaggacacca

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insectioides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL30512) and the encoded proteins (ABB57737-ABB77372). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CGTAGCGGAACGTGCGCCGCATTCGCGGCTGTCCTGCCAGATCCGCCTTACCGACCTGCT

The invention relates to an isolated polynuclectide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH5081, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynuclectide. The nucleic acid sequences are useful in disgnostics as expressed sequence tags (BST) for inforensics, in assessing biodiversities, or in identifying mutations in forensics, in assessing biodiversities, or in identifying mutations in forensics, in assessing biodiversities, or in identifying mutations or esponsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of correctin, or in generating antisoases bNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/SST sequences. Note: The sequence data obtained in electronic format directly from USFPTO at sequence data obtained in electronic format directly from USFPTO at sequence. Sequence thin Patent did not form part of the printed specification, but was obtained in electronic format directly from USFPTO at sequence.
                                                                                                                                                                                   New polynuclectide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            211 caggaragacargasagagacargrassagacaracaragacargaracargarara 270

                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insectioides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence (ABL16175) and the encoded proteins (ABB57737-ABR37272). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (Sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences corresponding to informatics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probles, as oligomers for PCR, correction, or in generating antisense DNA or RNA. The purified polypeptide is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this parent did not form part of the printed specification, but was contained in electronic format directly from 19970 at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CDNA libraries, useful

The invention relates to 446 newly isolated polynucleotide sequences. The activity of polynucleotides of the invention may be described as, vulnerary, neuroprotective, immunomodulator, cytostatic and anti-inflammatory. Compositions comprising nucleic acids of the invention are useful for treating a mammalian subject, or as nutritional sources or supplements. These are useful in gene therapy, particularly for treating wounds, burns or ulcers, Alzhamer's disease, Huntington's disease, inflammation. The nucleic acids and polypeptides are also useful in diagnostic and research methods. The sequences given in records ABQ6038-ABQ61233 represent polynucleotides of the invention. NoTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          348

New human signal peptide-containing proteins useful in treatment, prevention and diagnosis of e.g. cancer, inflammation and cardiovascular disease.

Claim 9; Page 326; 327pp; English.

human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anticoncer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, neuroprotective, cardiovascular and antiasthmatic activities, and can be used in gene therapy. HSPPs can be used to treat or prevent disorders associated with decreased activity or function of HSPP. Antagonists of HSPP are used to treat or prevent disorders associated with increased activity or function of HSPP. Such diseases include cell proliferation (HSPP are used to treat or prevent disorders associated with increased activity or function of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, reproductive or developmental disorders, (e.g. arteriosclerosis, croproductive or developmental disorders, (e.g. arteriosclerosis, circhosis, psoriasis, acquired immune deficiency syndrome, anaemia, circhosis, psoriasis, acquired immune deficiency syndrome, anaemia, circhosis, cronnic disease, microbial or other infections, congestive or ischaemic heart disease, microbial or other infections, congestive or detecting HSPP in standard hybridisation and amplification assays (for detecting HSPP in standard hybridisation and amplification assays (for diagnosis and monitoring), in gene therapy, as antiense or triplex-forming or ribozyme therapeutics, for detecting related sequences or genetic variations, and for chromosomal mapping. HSPP are also used to raise specific antibodies (Ab) and to screen for agonists and antagonists, in connective day screens, and for purification of HSPP from natural

TROPICALIS SEQUENCY
TROPICALIS SEQUENCY
This Sequencing primer: SP6
This sequence is from a Xenopus Gene Collection (XGC) library
constructed by Aaron M. Zorn.
CDNA was oligo dT primed from 5ug of poly A+ RNA from egg.
ECONA was oligo at the ligated into pCS107 with EcoRI at the
5' end and NotI at the 3' end.
Vector: pCS107; Site 1: EcoRI; Site 2: NotI
Host: Escherichia coli XL1-blue.

```
the laboratory of Denis Le Paslier at the Centre d'Etude du Polymorphisme Humain (CEPH), Paris, France. Briefly, Trypanosoma cruzi (C.Berner agarose embedded DNA (Obtained from Dr. Franco da Silveira) was partially digested with Hin dIII. High molecular weight fragments were ligated in pase 100 kb. Total clone coverage: approx. 33 X the haploid genome."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BM643564 17000687312521 A.Gam.ad.cDNA1 Anopheles gambiae cDNA clone 1500049629190 5', mRNA sequence.

| Patent No. 6551795
| GENERAL INFORMATION:
| APPLICANT: Marc J. Rubenfield et al.
| APPLICANT: Marc J. Rubenfield et al.
| APPLICANT: Marc J. Rubenfield et al.
| TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
| TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
| FILE REFRENCE: 107196.13 6
| CURRENT APPLICATION NUMBER: US/09/252,991A
| CURRENT FILING DATE: 1999-02-18
                                                                                                                                                                                                                    1550
                                                                                                                                                                                                                                                                                                                                                                                                                  1551 Grácococicaración de casa de anticación de articaración de contra de co
